

1 **Abstract of Disclosure**

2 A tool-carrying device includes a toolbox with corners and armors each
3 embedded in corresponding one of the corners. The toolbox includes
4 comprises a recess defined in each of the corners in order to receive
5 corresponding one of the armors. Each of the corners includes a
6 plurality of holes located within the recess thereof. Each of the armors
7 includes a plurality of holes. A screw can be driven to each of the holes
8 of the corners through corresponding one of the holes of the armors in
9 order to secure the armors to the corners.
